

NATURE TEK SOLAR

Data & Information Requirements for Digital Product Development

29 May 2026

Document Version 1.0

PROJECTS IN SCOPE

#	Project Name	Brief Description	Primary Goal
1	AI Customer Support Chatbot	An AI-powered conversational chatbot to handle customer queries, product inquiries, and lead generation.	Automate 24/7 support
2	Customer Grievance Management System	A structured system for logging, tracking, escalating, and resolving customer complaints end-to-end.	Streamline complaint resolution
3	Project Tracking & Management System	An internal dashboard for managing solar installation projects, task allocation, timelines, and progress.	Improve operational visibility

Purpose of This Document

This document formally outlines the data and information requirements that our development team needs from Nature Tek Solar to design, develop, and deploy three interconnected digital products. Providing the requested materials will allow us to build accurate, scalable, and production-grade systems tailored to your operations.

We understand that not all data may be immediately available. Where complete data is unavailable, even sample data, anonymized records, or representative examples will allow the development process to progress without delay.

All data shared with us will be treated with strict confidentiality and used solely for the purpose of building these systems.

Project 1: AI Customer Support Chatbot

The objective of this project is to develop an AI-powered chatbot that can autonomously handle customer queries, guide prospects through the sales funnel, assist with troubleshooting, and seamlessly escalate complex issues to human agents. The quality and breadth of the data provided directly determines the chatbot's accuracy and usefulness.

1.1 Product & Technical Knowledge

The chatbot must have comprehensive knowledge of all products and services offered by Nature Tek Solar. Please provide the following:

- Solar panel specifications and datasheets (all models currently available)
- Inverter and battery specifications and brochures
- Product catalog PDFs and comparison sheets
- Installation requirements and compatibility guidelines
- Performance benchmarks (e.g., power output per panel model)

1.2 Frequently Asked Questions (FAQs)

FAQs form the quickest path to a useful, deployable chatbot. Please provide:

- FAQs currently published on the Nature Tek Solar website
- FAQs used by your sales team during customer consultations
- FAQs from your installation and after-sales support teams
- FAQs related to warranty, claims, and maintenance

Sample questions we expect the chatbot to handle: "How much does a 5kW system cost?", "What is the warranty period for your panels?", "Do you provide service in Pune?"

1.3 Historical Customer Support Conversations

Past interactions between customers and your support team are invaluable for training the chatbot to speak in a natural, relevant manner. Please share:

- Anonymized customer support email threads
- Chat transcripts from website or WhatsApp support (with personal data removed)
- Common customer complaints and their resolutions

Note: Please remove all personally identifiable information (PII) — names, phone numbers, email addresses — before sharing.

1.4 Pricing & Subsidy Information

- Residential and commercial product pricing lists
- Available government subsidies (PM Surya Ghar Yojana or state-level schemes)
- EMI and financing options offered
- Any ongoing promotional packages

1.5 Company & Geographic Information

- List of cities and states where installation services are available
- Office and service center locations
- Escalation contacts for sales, support, and billing departments
- Full website content (all pages: Home, Products, Services, About Us, Blogs, Contact)

1.6 Data Privacy Reminder

The following categories of data must NEVER be included in any files shared with us: customer passwords, Aadhaar numbers, PAN details, bank account information, or any other sensitive financial identifiers.

1.7 Minimum Viable Dataset (to begin development)

If a complete dataset is not yet available, the following six items are sufficient to begin the first development sprint:

#	Document / Data	Why It Is Needed
1	Product catalog	Core product knowledge for the chatbot
2	FAQ document	Fastest way to make the chatbot useful
3	Warranty policy document	Frequently asked by customers
4	Pricing document	Essential for sales and lead-generation flows
5	Website content (all pages)	Provides foundational knowledge base
6	Support contact information	Enables escalation to human agents

1.8 Knowledge Base & Documentation Sources

To improve chatbot accuracy and reduce hallucinations, please provide:

- Installation manuals
- Maintenance manuals
- Troubleshooting guides
- Warranty claim procedures
- Service manuals
- Product training material used internally
- Sales training documents
- Product certification documents
- Government subsidy process documentation

1.9 Lead Generation Requirements

Since the chatbot will also support sales and lead generation activities, please confirm:

Customer Information to Collect

- Full Name
- Mobile Number
- Email Address
- City / Location
- Property Type (Residential / Commercial / Industrial)
- Monthly Electricity Bill
- Desired System Capacity

- Budget Range

Lead Handling Workflow

- Which department receives leads?
- Should leads be assigned automatically?
- What information is mandatory before creating a lead?
- How should lead status be tracked?

Example statuses:

- New Lead
- Contacted
- Site Survey Scheduled
- Proposal Sent
- Converted
- Lost

1.10 Human Escalation Rules

Please define scenarios where the chatbot should transfer conversations to human staff.

Examples:

- Pricing disputes
- Complaint registration
- Warranty claims
- Technical troubleshooting beyond predefined knowledge
- Requests for quotations
- Customer dissatisfaction

Please provide:

- Escalation departments
- Contact persons
- Escalation priority levels

1.11 Chatbot Analytics Requirements

To measure chatbot effectiveness, please identify which metrics are important.

Examples:

- Number of conversations per day
- Number of leads generated
- Most frequently asked questions
- Escalation rate
- Customer satisfaction score
- Failed or unanswered queries

Project 2: Customer Grievance Management System

This project involves developing a full-featured system for logging, assigning, tracking, and resolving customer complaints. To build a system that mirrors your actual workflows and organizational structure, we require the data outlined below.

2.1 Organizational Structure

Understanding how your company is structured will allow us to build accurate routing, escalation, and reporting logic.

- List of all departments relevant to customer complaints (e.g., Technical Support, Billing & Refunds, Installation, Sales)
- Names and roles of department managers or team leads
- Number of support agents per department
- Reporting hierarchy (e.g., L1 Support reports to L2, which reports to Manager)

2.2 Complaint Categories & Classification

We need to understand how your team currently categorizes and prioritizes complaints:

- List of complaint types/categories currently used (e.g., Product Defect, Installation Issue, Billing Dispute, Service Request, General Inquiry)
- Priority definitions — what criteria qualify a complaint as High or Critical?
- Any existing tagging or labelling conventions used by support staff

2.3 Current Complaint Handling Workflow

Please describe or document your existing complaint resolution process:

- How are complaints currently received (phone, email, WhatsApp, walk-in)?
- How are complaints assigned to agents — manually or by a rule?
- Under what conditions are complaints escalated?
- What is the expected resolution time for different complaint types?
- Is there a formal sign-off or closure process when a complaint is resolved?

Even a rough process flowchart, a WhatsApp conversation explaining the workflow, or a verbal description converted to a document will suffice.

2.4 Service Level Agreements (SLAs)

To implement automated SLA tracking and breach alerts, we require:

- First response time targets (by complaint category or priority)
- Resolution time targets (by category or customer tier)
- Escalation thresholds — at what point should a ticket be flagged to a manager?

2.5 Historical Complaint Data (Sample)

Sample or anonymized complaint records will allow us to build realistic dashboards and test all system features before go-live:

Field	Example Value	Notes
Ticket / Reference ID	INC-2026-0091	Any existing numbering format
Complaint Category	Product Defect	Use your own categories
Date Raised	28 May 2026	DD/MM/YYYY preferred
Department Assigned	Technical Support	—
Priority Level	High	Your own priority scale
Current Status	In Progress	e.g., Open, Closed, Escalated
Date Resolved	30 May 2026	Blank if still open
Resolution Summary	Panel replaced under warranty	Brief notes only

A minimum of 20–50 sample records (even fictional ones following this format) will enable complete dashboard and reporting development.

2.6 Customer Data Fields

To build the customer module, please confirm which of the following fields are relevant to your business:

- Full name, email address, phone number
- Location (city, state)
- Customer type (Residential / Commercial / Industrial)
- Customer tier or account classification (if applicable)
- Product purchased or service enrolled

2.7 User Roles & Access Control

Please provide the roles that will use the system and their responsibilities.

Examples:

Role	Responsibilities
Customer	Create and view complaints
Support Agent	Handle assigned complaints
Team Lead	Monitor team performance
Department Manager	Escalation handling
System Administrator	System configuration

Please specify:

- Permissions for each role
- Data visibility restrictions
- Approval authority levels

2.8 Notification & Communication Requirements

Please confirm which communication channels should be supported.

Examples:

- Email
- SMS
- WhatsApp

- In-App Notifications

Notification events:

- Complaint Created
- Complaint Assigned
- SLA Breach Warning
- Escalation Triggered
- Complaint Resolved
- Complaint Closed

2.9 Dashboard & Reporting Requirements

Please identify the reports and KPIs required by management.

Examples:

- Open Complaints
- Closed Complaints
- Average Resolution Time
- SLA Compliance Percentage
- Complaints by Category
- Complaints by Region
- Agent Performance Metrics
- Escalation Statistics

2.10 Audit Trail Requirements

To ensure accountability and compliance, please confirm whether the system should maintain activity logs.

Examples:

- Ticket Created
- Status Changed
- Assignment Changed
- Escalation Performed
- Resolution Updated

Project 3: Project Tracking & Management System

This system will provide Nature Tek Solar's internal teams with a centralized dashboard to plan, allocate, monitor, and report on solar installation projects. The data below is required to accurately model your project workflows and build meaningful reporting features.

3.1 Project Details

Please provide details of current or recent installation projects, including:

- Project name or unique project ID/reference number
- Project type (Residential, Commercial, Industrial, Government)
- Installed capacity (in kW or kWp)
- Project location (city, state)
- Project start date and expected completion date
- Current project status (Planning, In Progress, On Hold, Completed)
- Assigned project manager or site supervisor

3.2 Task Allocation & Team Data

To build the task management module, we need to understand how work is broken down and assigned:

- List of standard tasks involved in a solar installation project (e.g., Site Survey, Civil Work, Panel Mounting, Wiring, Inverter Installation, Testing & Commissioning, Documentation)
- Which team member or department is responsible for each task type?
- Are tasks assigned to individuals or teams?
- List of employees or teams involved in project execution (names/roles, no personal contact details required at this stage)

3.3 Project Timelines & Milestones

To implement Gantt chart views, deadline tracking, and milestone alerts, please share:

- Typical project phases and their standard durations (e.g., Site Survey: 1-day, Civil Work: 3 days)
- Key milestone definitions (e.g., "Materials Delivered", "Panels Installed", "Grid Connection Approved")
- Any existing project schedule templates used by the team
- Contractual or regulatory deadlines that must be tracked

Even a rough Excel sheet or a WhatsApp message listing the steps of a typical installation project would be a very useful starting point.

3.4 Progress Tracking Indicators

To build meaningful dashboards and progress indicators, we need to understand how project health is currently measured:

- How is completion percentage currently estimated? (e.g., by milestones achieved, by tasks completed, manually entered)
- What constitutes a project delay — how many days overdue triggers an alert?
- Are there budget or cost tracking requirements for projects?

- Are there client-facing status reports generated? If yes, what do they include?

3.5 Sample Project Data

Please provide sample data for at least 5–10 projects in the following format. Fictional data matching real-world patterns is perfectly acceptable:

Field	Example Value	Field	Example Value
Project ID	NTS-2026-042	Client Type	Residential
Project Name	Sharma Residence — Thane	Assigned PM	Rajesh Kumar
Capacity (kW)	5 kW	Start Date	10 Apr 2026
Location	Thane, Maharashtra	Expected End	25 Apr 2026
Status	In Progress	% Complete	65%
Active Milestone	Panel Mounting	Delay (days)	0

3.6 Integration Requirements

To ensure the Project Tracking System works seamlessly within your existing operations, please clarify:

- Are there existing tools in use (e.g., Excel sheets, Tally, ERP, Google Sheets) whose data should be migrated or synchronized?
- Should the system send automated notifications (email, SMS, WhatsApp) to team members for task assignments or deadline reminders?
- Should clients have a portal to view the status of their installation projects?

3.7 Resource Management Requirements

Please provide information regarding project resources.

Examples:

Human Resources

- Installation Teams
- Electricians
- Engineers
- Supervisors

Physical Resources

- Vehicles
- Equipment
- Tools
- Inventory

Please specify:

- Resource allocation process
- Resource availability constraints
- Resource utilization tracking requirements

3.8 Project Document Management

Please provide information regarding project-related documents.

Examples:

- Site Survey Reports
- Design Drawings
- Customer Agreements
- Government Approval Documents
- Safety Checklists
- Installation Reports
- Completion Certificates

Please specify:

- Document approval requirements
- Storage policies
- Version control requirements

3.9 Approval Workflow Requirements

Please describe approval processes involved during project execution.

Examples:

Process	Approver
Site Survey Approval	Project Manager
Design Approval	Technical Head
Material Dispatch Approval	Operations Manager
Final Project Closure	Senior Management

3.10 Alerts & Notification Requirements

Please confirm if automated alerts should be generated for:

- Task deadlines
- Milestone delays
- Resource shortages
- Budget overruns
- Pending approvals
- Project completion

Supported channels:

- Email
- SMS
- WhatsApp
- In-App Notifications

3.11 Project Analytics & Reporting

Please identify the reporting requirements.

Examples:

- Projects Completed
- Projects Delayed
- Average Project Duration
- Capacity Installed Per Month
- Resource Utilization
- Project Completion Trends
- Installation Team Performance
- Budget vs Actual Cost

SECTION 4: Enterprise Systems & Integration Requirements

4.1 Existing Software Ecosystem

To ensure smooth integration with current business operations, please provide details of any software systems currently in use.

Customer Management

- CRM Software (Zoho CRM, Salesforce, HubSpot, etc.)
- Lead Management Tools
- Customer Databases

Finance & Accounting

- Tally
- Zoho Books
- QuickBooks
- ERP Finance Modules

Communication Systems

- WhatsApp Business
- Email Platforms
- SMS Providers
- Call Center Software

Project Management Systems

- Excel Sheets
- Google Sheets
- ERP Software
- Project Tracking Tools

Inventory & Procurement Systems

- Inventory Management Software
- Warehouse Systems
- Vendor Management Systems

Please specify:

- Purpose of each system
- Data currently stored
- API availability
- Export/import capabilities
- Integration requirements
- Real-time or scheduled synchronization needs

SECTION 5: Security, Access Control & Compliance Requirements

5.1 User Types

Please provide a list of all user categories who will access the systems.

Examples:

- Customers
- Sales Executives
- Support Agents
- Team Leaders
- Project Managers
- Installation Engineers
- Accounts Team
- Senior Management
- System Administrators

5.2 Role-Based Permissions

For each user type, please specify:

- View permissions
- Edit permissions
- Delete permissions
- Approval authority
- Reporting access

5.3 Authentication Requirements

Please specify preferred login methods:

- Username & Password
- Mobile OTP
- Email OTP
- Single Sign-On (SSO)
- Google Login
- Microsoft Login

5.4 Data Security Requirements

Please clarify:

- Data retention requirements
- Backup frequency
- Access logging requirements
- Audit requirements
- Compliance requirements (if any)

SECTION 6: Infrastructure & Scalability Requirements

6.1 Deployment Preferences

Please specify:

- Cloud Hosting
- On-Premise Hosting
- Hybrid Deployment

6.2 Expected User Volume

1. AI Chatbot

- Expected daily users
- Monthly users
- Peak concurrent users

2. Grievance System

- Average complaints per day
- Number of support agents

3. Project Tracking System

- Number of active projects
- Number of internal users

6.3 Performance Expectations

Please specify expected system performance:

Examples:

- Maximum acceptable page load time
- Maximum chatbot response time
- Required system uptime (%)
- Business hours vs 24×7 availability

SECTION 7: How to Submit the Data

7.1 Accepted Formats

We can work with data provided in any of the following formats. Please do not spend additional time converting files — whatever format is most convenient for you is acceptable:

Format	Examples	Best Used For
Spreadsheets	Excel (.xlsx), Google Sheets, CSV	Project data, complaint records, employee lists
Documents	PDF, Word (.docx), Google Docs	FAQs, policies, product specs, manuals
Images / Scans	JPG, PNG, scanned PDFs	Product brochures, physical documents
Informal Text	WhatsApp messages, emails	Workflow descriptions, process explanations
Presentations	PowerPoint, Google Slides	Product overviews, training material

7.2 Recommended Folder Structure

If sharing via Google Drive or a shared folder, organizing files as follows will help us process them efficiently:

Folder Name	Contents
01_Products	Panel, inverter, battery specs, catalogs, comparison sheets
02_FAQs	Sales FAQs, support FAQs, installation FAQs, warranty FAQs
03_Pricing	Residential and commercial pricing, subsidy info, EMI options
04_Complaints	Sample complaint records, categories list, SLA definitions
05_Projects	Sample project data, task lists, milestone definitions
06_Org_Structure	Department list, team hierarchy, employee roles
07_Policies	Warranty policy, refund policy, terms and conditions
08_Website_Content	Text exports or screenshots of all website pages

SECTION 8: Closing Note

We appreciate Nature Tek Solar's trust in engaging us for these three strategic digital projects. We are committed to building systems that genuinely reflect your operations and serve both your team and your customers effectively.

We fully understand that compiling comprehensive data is a time-consuming process. Please do not let the breadth of this document discourage you — any data you are able to provide, even informally, will accelerate our progress. We are available to assist with data collection calls, guided walkthroughs, or structured interviews whenever convenient.

We look forward to your response and are happy to schedule a call to walk through this document together. Thank you for your time and cooperation.
